Context

Field	Vocational Education and Training			
Project Title	Digital Inclusion through Cybersecurity and Ethical AI (DICE)			
Project Acronym	DICE			
Project Start Date (dd/mm/yyyy)	Project Duration	Project End Date (dd/mm/yyyy)	National Agency of the Applicant Organisation	Language used to fill in the form
01/09/2025	14 months	31/10/2026	DE02 - Nationale Agentur Bildung für Europa beim Bundesinstitut für Berufsbildung	English
Project lump sum	60 000,00 €			

You can find the contact information of all National Agencies at the following webpage: [List of Erasmus+ National Agencies](#).

Priorities and Topics

All project proposals under the Erasmus+ Programme should contribute to one or more of the programme's policy priorities.

Please select the most relevant priority according to the objectives of your project.

HORIZONTAL: Inclusion and diversity in all fields of education, training, youth and sport

If relevant, please select up to two additional priorities according to the objectives of your project.

HORIZONTAL: Addressing digital transformation through development of digital readiness, resilience and capacity

VET: Contributing to innovation in vocational education and training

Please select up to three topics addressed by your project.

Artificial Intelligence (AI) and data usage

Digital safety and data protection

Human rights and rule of law

Project description

What are the concrete objectives you would like to achieve and 'outcomes or results you would like to realise'? How are these objectives linked to the priorities you have selected?

As the EU moves in an AI race between giants, an era with very high rate of digital transformation of economies and societies, learners with fewer opportunities are facing unprecedented challenges, especially in Cybersecurity and AI. C-VET learners and educators themselves point to the skills gap in the formal system, resulting in exclusion and vulnerability. This project is in line with the digital horizontal priority since it aims to increase the capacity and readiness of institutions to manage an effective shift towards digital education by providing them with a tool leading to competences in the field of Cybersecurity and AI. The tool represents a perfect mix of digital pedagogy and expertise, promoting digital literacy and access to new technologies. This perfectly connects to the priority of contributing to innovation in vocational education and training. Our project prepares C-VET education for the future AI driven economy with awareness and practical knowledge of the importance of cybersecurity and Ethical AI in the context of the way that C-VET is practice and managed on institutional level. Moreover, the project is closely related to the priority of inclusion of the Erasmus+ Programme, which aims to ensure equal access and opportunities for people with fewer opportunities as equivalent but not limited to the definition in the programme guide and SALTO. The European Pillar of Social Rights also emphasises the need for inclusive systems of education and training supporting lifelong learning and digital skills. This project will inspire and empower others to participate with a focus on digital inclusion, cybersecurity, and ethical AI. Allowing C-VET learners with fewer opportunities to fully engage in the digital economy, thereby fostering the EU's larger ambitions to reinforce social cohesion, to spur economic growth, to reclaim technological sovereignty.

The project aims at digital inclusion of C-VET learners with fewer opportunities through an educational framework in the field of Cybersecurity and Ethical AI which is based on a practical non-formal educational methodology that will be used as an addition to the formal and non-flexible framework. By highlighting the importance of cybersecurity and ethical AI literacy in C-VET the project aims to create an advanced e-learning platform composed of seven modules aimed to educate C-VET learners, educators, and professionals and enable them to exercise the right skills and knowledge to safely navigate the digital world and enjoy full inclusion. The specific project objectives are:

- Promote Cybersecurity Awareness and provide C-VET learners and educators with essential cybersecurity skills to fully take advantage of the digital citizenship opportunities.
- Increase understanding of AI and ethical AI concepts and their use in C-VET context
- Establish cross-sectoral collaboration between C-VET institutions, cybersecurity professionals, and artificial intelligence professionals

Please outline the target groups of your project and describe their identified needs

DICE targets C-VET learners with fewer opportunities (including people with disabilities and people with a migrant background, as well as people living in rural and remote areas such as outermost regions, people facing gender inequalities, socio-economic difficulties or any other potential source of discrimination based on sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation. DICE will address adult learners, workers, and unemployed individuals with training at vocational schools, on-the-job, and in public seminars. Digital Skills Gap: 42% of EU citizens have insufficient basic digital skills (Eurostat, 2022). In Germany, 22% of 16-74 year-olds have low or no digital skills, and this goes up to 56% in Bulgaria, respectively. In Germany, only 17% of ICT specialists are female; in Bulgaria 19% (Eurostat, 2022). Language and cultural barriers can lead migrants to become excluded from the digital economy. About 13.1 million people have a migrant background in Germany (Federal Statistical Office, 2021). In Bulgaria, migrants suffer from economic and social exclusion that prevents them from gaining access to digital resources. DICE will provide them with AI-based learning and coaching tool of and competency certification for generative AI-based value creation and protection in small businesses that increases their chances and prospects for economic and social integration in a digital economy.

C-VET Educators and Trainers

A survey in Germany found that 60% of VET trainers reported requiring further training in digital skills (BIBB, 2021). Management of VET systems in Bulgaria highlighted that lack of opportunities for professional development for educators was a considerable barrier to transformation in digital VET. While it would not be realistic to expect that VET educators would become AI or Cybersecurity experts overnight, DICE will answer the need of lack of effective teaching tools. The project creates a resource that could provide extra curricula education. DICE will provide them with open educational resources (OER) and tooling for generative AI literacy training.

C-VET Institutions do not sufficiently address cybersecurity and ethical AI yet. In Germany for instance, 45% of VET institutions indicate problems integrating digital skills in their programmes (BIBB, 2021). Bulgaria, slow bureaucracy and outdated infrastructure, are limiting digital transformation. As a step forward, our project tends to initiate collaboration, ensuring its programmes are relevant to labour market, between VET institutions and industry experts.

Local Public Bodies often lack the skills to craft policies that advance digital inclusion and cyber safety. In Germany, one in three municipalities say they lack the necessary resources to pursue digital transformation (BMW, 2021). In Bulgaria local governments have limited funding and expertise to pursue digital strategies, In Germany, only 40% of policymakers state they are familiar.

Please describe the motivation for your project and explain why it should be funded

The initiative covers several priorities of the Erasmus+ programme such as: inclusion and diversity; digital transformation;

innovation in VET. It also promotes inclusive education and lifelong learning to support the European Pillar of Social Rights. As the project's main aim is digital inclusion with a special focus on those who are most underrepresented in the tech world, it can support the EU's efforts to close the 'participation gap' in the long run by addressing the tech inequities present in our society today. The project addresses an urgent and growing demand for digital skills, cybersecurity awareness and ethical AI understandings in C-VET education. It will better prepare individuals and organisations to thrive in the digital economy and society. The project's orientation towards underrepresented groups not only prevents no one is left behind but is in line with the EU goals of social inclusion and economic growth. The ethical use of technology is an area in C-VET education that is very relevant but often not defined or poorly addressed. Therefore, many C-VET learners and educators are unaware of the ethical implications of AI which can create unintended consequences in vocational contexts. By educating learners about ethical AI, this project will promote awareness of responsible AI, equipping them with the necessary skills to evaluate and implement such systems while ensuring fair and inclusive use of technology.. The project is in line with the EU's Digital Education Action Plan (2021-2027) which highlights the importance of inclusive and high-quality digital education, and the European Skills Agenda, intended to equip individuals and organisations with future-proof skills.

By promoting digital inclusion, the project will empower marginalized voices including women, migrants and people with limited digital literacy, to fully engage in the digital economy.

This project is based on a very clear and precise methodology that will guarantee results. We have started with a very good needs analysis as we identified the target groups and carry out a survey and focus groups with them to define the training needs and knowledge gaps Based on those needs and the results of the survey provided by the Italian partners as a direct representative of the target group we have joined forces with cyber security (Germany) and AI experts(Bulgaria) to write the seven modules. As a product of collaboration between technology partners and adult education experts the e-learning platform will be very easy to use and it will be pilot tested to perfection. The testing of the platform and modules will be with the representative of the target group guaranteeing maximum user satisfaction.

We have checked the Erasmus + project results database for similar projects and we have not found any small scale project that combines cybersecurity and ethical AI in VET education. It could be said that this project is quite innovative with its integrative narrative.

How does the project address the needs and goals of the participating organisations and the target groups ?

cyberGEIGER aims to reach a wider audience of VET learners and educators with its cybersecurity tools and programs. In addition it seeks cross-sectoral collaboration to help amplify its initiatives. The project aims to respond to the need expressed by cyberGEIGER and to improve its visibility and quality in front of VET institution settings and women and minorities groups. This gives the company a social responsibility component and a challenge to cater to the needs of a different target group

AFORISMA as a C-VET expert and a social enterprise with strong social inclusion narrative through this project strives to reduce or minimize inequalities and fosters digital inclusion, particularly for these disadvantaged groups. This project corresponds with AFORISMA's mission of making digital education accessible. Through this partnership it strengthens its position and presence among those who provide digital and professional training as one of the leading companies in the space

HumAI's involvement in the project consolidates its position as a developer of ethical / AI technology and education on European level, with a social responsibility component making highlighting its reputation in the business world. Also this project answers to the need of increased capacity to participate and manage EU projects.

This project answers to the following needs of C-VET learners:

- Lack of Digital Education and Cybersecurity Skills and Ethical AI awareness - The majority of VET learners do not have access to digital education and resources, duly limiting their opportunities for personal and professional development.

C-VET Educators and Trainers

60% of VET trainers say that they need further training for digital skills in Germany (Federal Institute for Vocational Education and Training, BIBB, 2021).

45% of teachers in Italy feel unprepared to teach digital skills (OECD, 2021). In Bulgaria the situation is even worse.

In the EU only 20% of C-VET institutions have applied more advanced digital tools to teaching (European Commission, 2021).

The platform enables VET institutions to update their curricula with timely content relating to both cybersecurity and ethical AI.

Public Bodies and Policymakers

30% of municipalities in Germany state that they lack the resources to initiate the digital transformation (Federal Ministry for Economic Affairs and Energy, BMWi, 2021). One of the main findings of the research is that local governments in Bulgaria do not have adequate knowledge of how to develop and successfully implement digital strategies (European Commission, 2021). In Italy, for example, 40% of policymakers state they have limited understanding of AI ethics (Bertelsmann Stiftung, 2021). This has resulted in digital education policy being ineffective at various levels of governance within the EU, which is one of the main coordinating executive agencies (European Commission, 2021), where only 25% of the local public bodies have actually received training.

What will be the benefits of cooperating with transnational partners to achieve the project objectives ?

The AI and cybersecurity integration into C-VET education requires an EU wide approach since it constitutes a common

challenge and a joint EU policy framework. The collaboration of partners from Germany, Italy and Bulgaria benefits not only the project results, but also the success and sustainability of the project. This partnership merges different disciplines and best practices in ethical AI, cybersecurity and C-VET education. The partners from different regions inside the EU, will bring with them some unique perspectives at upskilling, reskilling and AI Education that reflects the needs and relevance of different segments of the EU. The competencies of the partners in this project are complemented. With this variety, the project will produce better quality training material and will be more effective as a project that will take into consideration various aspects of society in inclusive environment. In this sense, the transnational partnership has a positive impact on the ability of the project to build high-quality educational platform and content for it, as the transnational nature also opens access to the diversity of resources that support the scaling and transfer of the results of the project to various contexts and needs. In addition, the multinational aspect widens the horizons of the project, increasing access to a more diverse population across various geographical and economic contexts. This enables replication and adaptation of successful AI and cybersecurity education models in different national environments, maximising the impact of the project. Such a wider dissemination and implementation directly contribute to new standards in AI-cyber-enabled C-VET education at EU level. Cross-border cooperation corresponds with the European Union objectives of innovation, social inclusion, and digital education among member states. These types of transnational partnership shape policymakers because they show how to effectively embed AI and cybersecurity in education. This also feeds into the development of EU-wide digital education strategies, policies and initiatives. As for the sustainability, the project establishes long term relations and networks among the participating organisations in the project and creates new transnational EU projects within the scope of the E+ Programme. Such enduring collaborations can help us sustain AI and education innovation beyond the lifespan of the project itself and enhance its long-term impact and the ongoing work of its initiatives. Being a European is to coexist with multi-culture societies. By doing transnational projects with partners from different cultural backgrounds in the EU, grows the capacities of the project team to interact with educational and cultural contexts and different learner types. This exchange fosters inclusiveness and ensures that project outputs are accessible and relevant to a varied learnership, which will enhance social cohesion and mutual understanding between cultures.

How does the project address the horizontal priorities ?

Inclusion and Diversity

The project targets VET learners from underrepresented groups and with fewer opportunities, more precisely, women, migrants and people with low digital literacy. Many of them lack equitable access to information and communications technologies and are also at risk of being left behind as the world undergoes a digital transformation. This project is not just another e-learning platform it creates a tool with an intuitive user interface, multilingual, and tailored to the needs of learners with diverse levels of digital literacy. This allows even those who know little about the subject to participate. The project will seek to engage these groups through partnerships with local organisations, community centres and VET institutions that service disadvantaged communities.

Digital Transformation

This project empowers learners to embrace digital skills through extensive training for cybersecurity and ethical AI, bridging important gaps in C-VET education. The project provides C-VET educators with the knowledge and tools they need to teach digital skills effectively, creating a multiplier effect. This project aligns with the EU's Digital Education Action Plan (2021-2027) together with the European Skills Agenda by guaranteeing that learners and educators acquire future-proof skills. The project is an active supporter of digital transformation in C-VET education (technologies, services and models applied in practice developed through digital transformation) which provides a learning environment where learners and educators acquire the knowledge, skills, and behaviours that empower them to use the digital world ethically and responsibly.

Environmental Sustainability

The project is the e-learning platform, which contributes to minimization of required printed materials and travelling to the trainings. The platform features content related to the environmental effects of digital technologies and encourages learners to adopt sustainable practices in their work and home life. The platform will be deployed on energy efficient servers to reduce its carbon footprint.

Engaging in Democratic Life

The project enables women, migrants and low-digital literate individuals – traditionally overlooked groups – to take part in society and the economy. In this sense, Modules 5 and 6 include discussions related to ethical AI, as well as broader considerations about technology in the world and digital citizenship. It empowers individuals to responsibly navigate the digital world and encourages participation in civic life and democratic discourse about technology, ethics, and society.

Participating Organisations

To complete this section you will need your organisation's identification number (OID).

If you have an OID number please introduce it in this section.

If you are not sure if you have OID number, you can check here: [Organisation Registration System](#)

If you do not have OID number, you can create one here: [Register New Organisation](#)

Whenever an OID has reached the limit agreed of appearances in drafts and submitted forms, a notification by email will be sent to the Authorized person of that OID. We can include in the email a list of projects where that OID is encoded providing all the information necessary for him to act if he needs to: Form ID, Name of the applicant organization, National agency. If we don't have the NA and the applicant organisation filled in the form **we don't count this form** to the value which triggers the email notification.

According to the Programme Guide, each organisation (OID) can apply only once as applicant organisation and can be included in a total of 5 Small-scale partnerships in the fields of vocational education and training, school education, adult education and youth per application round. The maximum number includes all applications in the listed fields, regardless of whether the organisation is a coordinator or a partner. Once this limit is reached, it will not be possible to submit further applications with the same organisation (OID).

Applicant - cyberGEIGER GmbH (E10329847 - DE)

Organisation ID	Legal name	Country
E10329847	cyberGEIGER GmbH	Germany

Applicant details

Legal name	cyberGEIGER GmbH
Country	Germany
Region	BADEN-WÜRTTEMBERG
City	Freiburg
Website	https://www.cyber-geiger.com/

Profile

Is the organisation a public body?	No
Is the organisation a non-profit?	No
Type of organisation	Small and medium sized enterprise

Background and experience

Please briefly present your organisation.

What are the organisation's main activities?

cyberGEIGER's vision is to simplify cybersecurity and data protection so that business or organisation can become safe and compliant - even the smallest ones that typically lack expert knowledge.
cyberGEIGER offers an artificial intelligence-driven digital service that helps small businesses assess cybersecurity in a way that is understandable and easy for laypeople to use. It provides step-by-step protection recommendations and incident response facilitated by a curated portfolio of technical and educational tools and an expert-supported community of laypeople.
cyberGEIGER is a spin-off of the successful Horizon2020 project GEIGER (No. 883588—<https://www.cyber-geiger.eu/>). In its roadmap towards realising its vision, cyberGEIGER collaborates with innovators to advance ICT technology and training for VET and more senior target groups' data protection and cybersecurity needs.
Due to its international composition of associates cyberGEIGER can act in different European countries.

What are the organisation's activities in the field of this application?

Part of the tools portfolio, cyberGEIGER offers a framework for designing pedagogical conversational agent skills and composing them into tailored learning experiences in cybersecurity and data protection for laypeople. Some more advanced

skills under development are interactive role-playing games and escape rooms for individuals and groups of learners. Participants who successfully conclude the training have the opportunity to be certified and, thus, become members of the lay community.

The cyberGEIGER conversational agent is a resource that supports teachers in learning how to configure the agent skills and compose them into a tailored learning experience that meets the teacher's and learners' needs. It supports reflecting on the experience and improving the agent skills and teacher-designed learning experience for future learning occasions. As such, the conversational agent serves as a support for educators, improving the quality of teaching through the use of digital platforms.

What profiles and age groups of learners are concerned by the organisation's work?

cyberGEIGER, as a spin-off from the Horizon 2020 project GEIGER, mainly addresses adults in (small) business contexts as well as vocational learners.

A minor target group are students on secondary school level in concern of data protection and data economical issues (cf. datapro.education).

How many years of experience does the organisation have working in the field of this application? Please reply with a number of years of experience, for example '10'

Would you like to make any comments or add any information to the summary of your organisation's past participation?

The operational staff involved in the project are:

Prof. Dr. Samuel Fricker (Local Coordinator)

Samuel is an executive director of cyberGEIGER GmbH. He has a doctorate from the University of Zurich. As a professor at FHNW University of Applied Sciences in Switzerland, he has open-science experience in the research of generative artificial intelligence applications in software engineering and education. Samuel believes that disruptive solutions require maximal simplicity to be practicable. Over the past decade, this thinking has led to GEIGER, an approach that helps small businesses adopt cybersecurity.

Samuel is an experienced educator for students from VET to PhD and further education in industry. He was the coordinator of the Horizon2020 project GEIGER and is an experienced expert evaluator and reviewer for the European Commission. Samuel has also contributed to standardisation, including the Small Business Standards Guide on Information Security Controls for SMEs and a cybersecurity module of ICT-Berufsbildung Schweiz.

Renata Säuberli

Renata Säuberli is responsible for product development for cyberGEIGER. She has a bachelor's in project management, specialising in tourism development and social behaviour studies.

She turned to the technology field and built up her own business as an entrepreneur, the association Youth Intelligence Agency (YIA), where children are taught several technology areas. She believes in the revolution of education in the age of digitalisation and is currently developing modules for education in cybersecurity at cyberGEIGER. She has experience in cybersecurity education for laypeople, including in vocational training and children, as well as in validating technologies for education in relevant and operational environments.

Nosakhare Ahanor

Nosa studied Computer Science at the Federal University of Petroleum Resources in Nigeria. He has worked in different software development projects - among other in the GEIGER project for FHNW.

Profile

Is the organisation a public body?	No
Is the organisation a non-profit?	Yes
Type of organisation	Social enterprise
Main sector of activity	Other (specify)
Please specify the main sector	VET and lifelong learning

Background and experience

Please briefly present your organisation.

What are the organisation's main activities?

AFORISMA is a cooperative specialized in lifelong learning and VET. It is a part of the ACLI (Italian Workers' Christian Association) network, one of the largest and most widespread social promotion associations in Italy on labour issues. AFORISMA is accredited by the Tuscany regional Government as a training provider and with the Italian Ministry of Labour as an Employment Agency. AFORISMA was established in 2006 and is constantly expanding its activities. Every year, Aforisma takes on about 1,000 people in active labour policy projects. Training courses are organized for many different target groups, including adult learners, youth, NEETs, workers in the sanitary and care sector, University professors, teachers, and other professionals. Many of Aforisma activities are addressed to people with disabilities or at risk of social exclusion and are carried out on behalf of public services. From 2015 Aforisma is an official provider accredited under the Italian Ministry of Health.

What are the organisation's activities in the field of this application?

AFORISMA has a significant experience developed in projects related to digital alphabetization and/or digital inclusion having different target groups (mainly youth and adult learners enrolled in training or educational courses). AFORISMA has also developed projects, about social inclusion, at every level (local, regional, national and European). Since transitioning from in presence to blended learning activities following the Covid-19, the agency currently implements digital educational methodologies with its students and trainees, using an ad hoc platform (<https://www.aforismafad.it/didateca/>) and other long-distance learning tools, such as Google Classroom, always granting priority access to all courses for people with disabilities and/or learning difficulties. Since 2008, Aforisma developed a specific skills area related to job placement of people with disabilities, as well as in implementing new social enterprises, thus increasing its social vocation.

What profiles and age groups of learners are concerned by the organisation's work?

VET learners with fewer opportunities

17-55

NEETS

Refugees

Migrants

People with disabilities

Throughout the years Aforisma has built a strong network with associations, schools, and other social enterprises which created various placement opportunities for trainees of all ages, together with the development of joint cooperation through various regional, national and European projects. Aforisma obtained an ISO 9001 certification for training services and follows a strong internal

quality policy, offering high quality services for promoting the individual growth of attendees.

Profile

Is the organisation a public body?	No
Is the organisation a non-profit?	No
Type of organisation	Small and medium sized enterprise

Background and experience

Please briefly present your organisation.

What are the organisation's main activities?

Humanity AI Solutions is a forward-thinking European startup at the forefront of AI Governance, dedicated to placing humans at the center of AI development and deployment. Founded on the principles of ethical AI, transparency, and responsible innovation, we are committed to shaping a future where artificial intelligence enhances the human experience without compromising our values, rights, or dignity.

Our mission is to harness the power of AI to solve complex problems and promote equitable, just, and humane AI systems. We believe that AI should serve humanity's best interests, and our team of experts is dedicated to ensuring that AI technologies are developed and deployed with a deep sense of responsibility and a focus on human welfare.

What are the organisation's activities in the field of this application?

The company takes the role of an expert in the development of e-learning methodology and digital transformation of the learning and teaching environment powered by AI. It is specialised in the creation of advanced patterns of knowledge transfer and affirmation of learning goals. The unique approach goes beyond the standard implementation of multimedia in combination with ex-cathedra lessons, as it responds to the needs of the generation Z. The company has a solid background in the development of teachers and educators learning pathways with an innovation in the introduction of individual learning curriculum. As a software powerhouse, the company creates tools and applications that connect the learner with the learning objectives and teachers and educators for advanced evaluation outlets. The company develops integrated evaluation and certification framework using the micro-credentials approach..

We are one of the pioneers of the concept of micro-learning and learning.

What profiles and age groups of learners are concerned by the organisation's work?

Our mission is to harness the power of AI to solve complex problems and promote equitable, just and humane AI systems. We believe that AI should serve humanity's best interests varying from GenZ to Gen X.

We deal with young people, adult learners and VET learners aged between 18-60 years. Our main focus are those with fewer opportunities, migrants and refugees.

Viktor Miloshevski Director and Expert in advanced education, Phd Candidate in the field of Human Cognition and Evolution with 11 years of experience in the development and management of EU projects. Former Evaluator and Expert for the Erasmus + Programme focused on the KA2 Projects development and coordination. As part of his current research, he is specialized in Artificial Intelligence, Blockchain, AR and VR projects. He has an extensive experience in e-learning development, creation of virtual educational environments and online communities.

Nikhil Induru, IT manager Graduated in computer science and engineering at the Gitam University and currently pursuing cyber security engineering at the University of Florence. At the company he manages software and hardware networks and creates e-learning platforms and web and smart phone applications. He is experienced in building test cases for Blockchain Ethereum platform and has an extensive knowledge and experience in the artificial intelligence and big data.

Cooperation arrangements

How was the partnership formed? What are the strengths that each partner will bring to the project?

The representatives from HumAI and cyberGEIGER met in an online matchmaking session, and AFORISMA was introduced through other partners' recommendations.

In this project cyberGEIGER as a newcomer in this action has the role of specialist cybersecurity provider with an established record of designing cybersecurity tools and training programmes. Is a spin-off from the Horizon Cyber Resilience Project and as such, guarantees a leading-edge cybersecurity content and methodologies and hands-on component. cyberGEIGER is developed with hands-on, user-friendly tools that would be easy to implement, for stakeholders with no previous experience or knowledge, thus ensuring the cyber security modules from the project remains applicable to C-VET learners and trainers. cyberGEIGER is a fruit of an international consortium of cybersecurity and education experts who share their cross-border experience and best practices with the project and has a very strong dissemination capacities in more than 10 EU countries. GEIGER will take the lead on developing the modules for the cybersecurity training system (Modules 2 and 3) and has particular expertise in creating industry-oriented, vocational-based training content.

AFORISMA is government certified C-VET provider part of ACLI one of the largest networks in Italy. AFORISMA is a newcomer but has the opportunity to connect with a large number of stakeholders including local governments, training providers and community organisations through the network and ensure strong dissemination and adoption of the e-learning platform. AFORISMA has significant experience in lifelong learning and C-VET, focusing on digital literacy and inclusiveness. This expertise will help ensure that the content of the project is pedagogically sound and suitable for C-VET learners. AFORISMA is the right partner for targeting learners with fewer opportunities and their experience in social inclusion projects will guarantee that the project will perfectly reach its intended audience. The project's credibility is further established through the accreditation of AFORISMA by the Tuscany regional government and the Italian Ministry of Labour, ensuring compliance with national and regional education policies. The contribution is in Module 1 and Module 7.

HumAI

As a provider of AI governance and ethical AI, Humanity AI Solutions ensures that the project's materials on ethical AI (Modules 4, 5 and 6) are based on previous initiatives and aligned with European-centric guidelines like the Ethics Guidelines for Trustworthy AI. With the company's experience in micro-learning, social media algorithms, and latest knowledge transfer methods, the e-learning will be engaging, interactive, and responsive to Generation Z learners' needs. With its experience across the digital transformation landscape, Humanity AI Solutions will ensure that the platform is user-centric, accessible, scalable and aligned with the needs of different learners and educators.

How will you ensure sound management of the project and good cooperation and communication between partners during project implementation?

A proper project management and communication framework is central for the success of the project. This framework will describe important activities, when-to, and tools that will be used to ensure a successful collaboration between cyberCYBERGEIGER, HumAI and AFORISMA. Here's a detailed structure:

1 — Project Management Framework Meetings of the Project Management Team

Frequency: Bi-weekly

Purpose: To assess the progress of the project, make decisions at a strategic level, and solve issues at a high level.

Participants: Senior Management and Project leads - Key stakeholders from CYBERGEIGER, HumAI and AFORISMA

Scope of activities: Monitoring operations, deliverables, deadlines and budget compliance; Participants Project managers and coordinators from both organisations.

Work Package Team Meetings

Frequency: Bi-Weekly

Purpose: Report progress in detail on specific work packages, coverage of short-term challenges, and what to do next.

Contributors: Personnel from both organisations working on specific work packages.

Communication Framework

a. Professional Internal Communication Channels

Tools: WhatsApp and Google work spaces for managing day to day activities, Google Drive for sharing of all documents.

Aim: Accommodate communication, share documents, and monitor task progress among team members.

b. External Communication Mediums

Tools: Email to communicate regarding important matters with external stakeholders, Social media channels Facebook, Instagram, Youtube and X to update the stakeholder and engage them in the project, ensuring the transparency of the project with external stakeholders and distribute the achievements and milestones of the project.

Key Communication and Monitoring Activities Frequency

Progress Reports

Frequency: Monthly

Purpose: To provide an overview and report back on the detailed progress of the project, including achievements, challenges, and next steps. For your: All project members, steering committee and relevant interested parties.

Evaluation of Performance and Impact

Frequency: Bi-annually

Project Assessment and Evaluations — Objective: Measure how well the project fulfilled its goals and objectives and identify opportunities for improvement.

Risk Management Meetings

Frequency: Monthly

Studying the project risks and finding the root cause of the project failures.

Participants: Project management team & applicable wp team.

A Discussion on the Tools for Effective Management and Communication

Project Management software (Google workspace): To assign tasks, track progress, and manage milestones.

Zoom/Google Meet — video conferencing tools for meetings and workshops. Collaborative Platforms (Google Workspace)–

While not perfect, use Google Docs for some real-time collaboration on your documents, presentations, and spreadsheets.

For the communication with the Associated partners we will develop a special communication strategy on the kick-off meeting

Please describe how you will use Erasmus+ platforms for preparation, implementation or follow-up of your project?

Preparation Phase

To capture good practices and lessons learned from previous Erasmus+ projects. There are already a few projects in the field of VET on digital inclusion, cybersecurity and ethical AI. We made sure that our project brings unique and innovative value to the E+ community. We also seek out companies and organizations who have worked in these sectors.

Implementation phase

We will use eTwinning to target and engage with Initial VET (I-VET) and promote partnerships and cooperation with VET schools through Europe. Ideally we would like to build a strong consortium by establishing close collaboration with VET schools, educators and trainers in Germany, Bulgaria, Italy and all around the EU. We will utilise a project space on eTwinning to share documents, manage activities and follow developments.

We Hold virtual meetings and webinars to facilitate partner and stakeholder engagement

To engage with the target audience from continuous vet education (C-VET) we will use EPALE (Electronic Platform for Adult Learning in Europe).

Alongside the publishing of the results on the Erasmus + Project result platform we will post resources such as training materials, module outlines, and evaluation reports on EPALE as well

Please describe the tasks and responsibilities of each partner organisation in the project.

CYBERCYBERGEIGER

Project Management Leader:

Review Project Implementation: Ensure that the planning, execution, and monitoring stages of the project align with project cost, schedule, and choices throughout the project life.

Stakeholder Liaison: Serve as the primary liaison between the project team and stakeholders, such as funding agencies, and maintain transparency and alignment with stakeholder expectations.

Risk Management: by helping to identify challenges that could hinder the project achieving its outcome, and developing plans to lessen those challenges.

Development of the webpage

CYBERGEIGER and AFORISMA

Education Methodology Providers:

Design the Project's Curriculum — Develop and lead the project's educational curriculum based on experience with adult education, ensuring it is engaging, effective, and customized to adult learners' needs.

Engagement of Relevant Stakeholders- capitalising on extensive networking contact to engage relevant stakeholders and establish partnerships which can support the goals and sustainability of the project.

AFORISMA

Social inclusion action plan

Diversity management

Evaluation and quality assurance

HumAI

Technical Expert:

Technical platform integration

AI Integration: drive the integration of AI technologies into the educational tools and platforms of the project by working with relevant partners to ensure tools used are cutting-edge, approachable, and easy to use.

Technical testing

Certification and Micro-Credentials:

Develop a micro-credentialing or certification framework that recognizes learner achievements and ensures that credentials have meaning in the digital economy.

All partners

Social Media Campaign:

Design and implement a new holistic social media campaign that promotes the project, attracts potential learners, and shares outcomes.

Track the campaign's performance through analytics, adjusting strategies as necessary to optimise reach and engagement.

Meeting regularly to align on goals, solve challenges and take joint decisions for strategic directions.

Common Knowledge Base a repository of project documents, research, and educational materials that both partners have access to.

Evaluation and Feedback Loops: how project activities will include mechanisms for continuous evaluation of impact throughout the life of the project, including feedback loops from learners, educators, and stakeholders.

Communication with the associated partners and media

Dissemination events and local strategies

Sustainability planning, ensuring the project's impact and resources remain accessible beyond the life of the project.

Activities

All the activities of a Small-scale Partnership must take place in the countries of the organisations participating in the project. In addition, if duly justified in relation to the objectives or implementation of the project, activities can also take place at the seat of an Institution of the European Union, even if in the project there are no participating organisations from the country that hosts the Institution.

In the following sections, you are asked to provide details about each project activity.

You are asked to provide information about each planned activity as a whole (e.g. its venue, duration, etc.), to define the activity's lead organisation, and optionally to list the other participating organisations. The lead organisation is typically the one organising the activity. The other participating organisations are all other project partners who will also take part in the particular activity. The estimated activity start and end dates can be changed during implementation.

Please include in the section below all planned activities and indicate the grant amount allocated to each one. Keep in mind that the total amount should be equal to the Project lump sum requested.

Activity Title	Estimated start date	Estimated end date	Activity duration (in days)	Grant amount allocated to the activity (EUR)
Project Management and Evaluation	01/09/2025	31/10/2026	426	16 500,00
DICE E-learning platform	18/11/2025	17/06/2026	212	39 280,00
Social media outreach and dissemination	24/01/2026	31/10/2026	281	4 220,00
Total			919	60 000,00

Activity Details (Project Management and Evaluation)

Please complete the following table

Activity Title	Project Management and Evaluation
Venue	Germany
Estimated start date	01/09/2025
Estimated end date	31/10/2026
Leading Organisation	cyberGEIGER GmbH
Participating Organisations	SOCIETA' COOPERATIVA A.FO.RI.S.MA. - ACLI FORMAZIONE RICERCA SERVIZI MANAGEMENT (Italy) Humaniti AI Solutions EOOD (Bulgaria)
<u>Grant amount allocated to the activity</u>	16 500,00 €

Describe the content of the proposed activity.

The project will be managed with a mixed methodology, emphasizing Agile Project Management principles across its lifecycle. The project will unfold through the GOPP method's 4 phases: identification/definition, planning of activation/execution, monitoring/evaluation/verification, and final evaluation. The projects team coordination will ensure seamless interaction, with clear roles, regular meetings, and open communication channels utilizing Whatsapp, Google Meet and Google workspaces for the management of online data. The budget oversight as a critical component, and we will focus on tracking expenditures and ensuring compliance. The risk management plan will be made and will involve identifying and mitigating potential challenges proactively. The time management plan will prioritize adhering to deadlines by monitoring milestones and adjusting tasks as needed. The progress will be monitored and part of the reporting and record-keeping activities to maintain transparency and accountability, documenting every activity and decision. The impact assessment begin with an initial evaluation to set benchmarks, followed by continuous monitoring through surveys and evaluations to assess progress and effects. A mid-term evaluation will compare ongoing results against objectives, identifying improvement areas. The project concludes with a comprehensive final assessment and report, summarizing aims, methods, results, impacts, and recommendations for future initiatives. There are three main milestones, aligning with project meetings, mark control points: The Kick-off Meeting in Sofia-BG (M2), the Mid-term Evaluation (M7, Online), and the Final Evaluation Meeting (M12 in Germany).

Describe the target group for this activity. Who is going to take part and who is going to benefit from the results?

The Project Team Members including the delegated project managers from the participating organisations, the support staff, the trainers, the financial officers and others who handle various elements of the project. The Associated Project Partners including the collaborators outside of the project partnership They work in tandem with the project team to ensure the project's results are disseminated and used ensuring the sustainability of the project. The National Agency: while not directly participating in the project's daily management, are integral to the target group due to their interest in the project's proficient management and the effective, transparent use of their contributions. Stakeholders outside of the project team: This group comprises individuals or entities offering expertise, support, or supervision to the project, including advisory boards, mentors, and external consultants. They play a critical role in influencing project management strategies and actions. Project Beneficiaries (Indirectly): Though not actively engaged in managing the project, the primary recipients of the project's outcomes. Effective management is crucial for achieving significant and beneficial results for these groups. The Associated Partners in this project will take active role in the dissemination and exploitation of the results of this project. They will increase the visibility of the project and the active role of the National Agency and the Erasmus plus programme. The Associated partners will also participate in the creation of the new network that will create new projects in the same domain as the project.

Johanniter-Unfall-Hilfe e.V., Johanniter-Akademie Mitteldeutschland, Solaris Förderzentrum für Jugend und Umwelt gGmbH Sachsen (FZU), IB - Internationaler Bund – Freiburg City of Sofia- Education department, University of National and World Economy-Bulga, City of Pisa
Acli - Associazioni Cristiane Lavoratori Italiani.

Explain how is this activity going to help to reach the project objectives.

The solid project management plan will provide a framework for the partners that will help in identifying the most accurate path to successfully project implementation. It will organises resources, manages timeframes, and ensures that tasks are completed in the most effective way possible.

The meeting and communication strategy will facilitate understanding and trust among the project partners and the other project stakeholders. This activity will guarantee that the expectations are met and will ensure that everyone is on the same page regarding project goals and progress. The risk mitigation strategy will Identify potential risks early in the project

lifecycle, opening space for the project partners to develop mitigation strategies and action plan that will address these risks, minimising the impact on the project, its result and the exploitation potential.

The Agile Quality Control Framework will ensure that the project's deliverables are meeting the required EU standards and project expectations, contributing to the overall quality of the project.

The Networking and European dimension of this activity will directly influence the sustainability component of the project. Introducing this topic to the Associated partners and engaging them to actively participate in the creation of a new network on European level that will produce new projects in the same domain under the framework of the Erasmus + Programme.

Describe the expected results of the activity.

The most visible result of this activity will be the successful implementation of this project, accompanied by several key achievements resulting from the various activities and stakeholder feedback, including:

- The successful implementation of the initial transnational project meeting.
- The establishment of solid legal and financial partnerships among the involved entities.
- The creation and fully functioning of a comprehensive e-learning platform.
- The successful creation and implementation of a social media campaign with substantial reach.
- Positive feedback and high satisfaction levels from all stakeholders.
- An effective and favorable project evaluation.
- Efficient and accurate internal and external communication.
- Notable media attention and increased community awareness regarding the project.
- The delivery and approval of the final project report.
- Maintained positive relations with the National Agency.
- Established network on European level.
- The creation of three new projects within the network community formed through this project's initiatives

Please describe how you determined the grant amount attributed to this activity.

The first fixed monthly amount represents a contribution to project management, a lump sum that will be used to cover the expenses of the organisations related to the implementation of the project plan.

cyberGEIGER - 13 months x 400 EUR (per month) = 5200 EUR for the total project implementation

HumAI -13 months x 300 EUR (per month) = 3900 EUR for the total project

AFORISMA-13 months x 300 EUR (per month) = 3900 EUR for the total project

The budget for the project management is 13,000 EUR representing below 25% of the total budget

Transnational project meeting

This meeting will be implemented in Bulgaria

HumAI 2 participants x 250 EUR for travel, meals and accommodation= 500 EUR

cyberGEIGER- 2 participants x 750 EUR for travel, meals and accommodation= 1500 EUR

AFORISMA- 2 participants x 750 EUR for travel, meals and accommodation= 1,500 EUR

Final evaluation meeting will be budgeted by the budget from the budget of the final conferences as it will be merged with the final conference to maximize the budget efficiency and reduce the carbon footprint.

Sub Total budget = 13 000 EUR for project management + 3500 for the TPM Total budget= 16 500 EU

Activity Details (DICE E-learning platform)

Please complete the following table

Activity Title	DICE E-learning platform
Venue	Virtual activity
Estimated start date	18/11/2025
Estimated end date	17/06/2026
Leading Organisation	Humaniti AI Solutions EOOD (Bulgaria)
Participating Organisations	SOCIETA' COOPERATIVA A.FO.RI.S.MA. - ACLI FORMAZIONE RICERCA SERVIZI MANAGEMENT (Italy)

cyberGEIGER GmbH (Germany)

Grant amount allocated to the activity 39 280,00 €

Describe the content of the proposed activity.

Module 1 (AFORISMA)

Learning objectives (LO):

Understand what digital inclusion is & why it matters today.

Address Digital Inclusion barriers: access, skills, motivation

Manage strategies to advance digital inclusion in C-VET contexts

Consider how digital inclusion might help mitigate social and economic inequities

Module 2: Introduction to Cybersecurity (cyberGEIGER)

LO:

The importance of Cyber Security in both personal and professional lives.

Recognize common cybersecurity threats like malware, phishing, and data breaches.

Understand the basics of cyber security measures in practice

Realise the relevance of safeguarding personal and organisation data.

Module 3: Advanced Cybersecurity for the C-VET Professionals (cyberGEIGER)

LO:

Embark on learning about advanced topics in cybersecurity, like encryption, firewalls, and network security.

Learn about the impact of cybersecurity in c-vocational industries

Module 4: Introduction to Artificial Intelligence (HumAI)

LO:

Understand what is artificial intelligence (AI)?

Get inspired by real-world AI examples in vocational settings, such as automation and predictive analytics.

Consider the opportunities and complexities that come with AI through case studies.

Module 5: Applied AI (HumAI)

LO:

Learn how ethical AI practices should be implemented into vocational and educational spaces

Discover approaches and tools for Ethical AI

Consider the role of C-VET professionals as champions for ethical AI.

Module 6: Ethical Principles in AI (HumAI)

LO:

Understand the ethical implications of AI, including bias, transparency, and accountability.

Explore frameworks for ethical AI, such as the EU's Ethics Guidelines for Trustworthy AI.

MODULE 7: Digital Skills for Lifelong Learning (AFORISMA)

LO:

Understand the concept of Lifelong Learning in the digital world.

Outline a plan to keep your digital skills and knowledge current.

Understand the role do digital skills play in career development and personal growth

Describe the target group for this activity. Who is going to take part and who is going to benefit from the results?

C-VET Learners with Fewer Opportunities (as defined above) Learning and Inclusion: The system is made to be easy to use and available in multiple languages, allowing students with differing levels of digital literacy to interact effectively. The modules are designed to tackle real-world issues, for example, addressing barriers to digital inclusion (Module 1) and building foundational cybersecurity skills (Module 2).

The platform offers practical, vocational training that enables learners with tools to actively join the digital economy.

Learners can gain confidence in using digital technologies and overcome language and cultural barriers

Toolkit for Lifelong Learning: Digital skills for lifelong learning (module 7) promote ongoing development and growth throughout one's personal and professional life. This is especially useful in adjusting to the demands of the evolving labour market.

C-VET Educators and Trainers

Pre-Created Materials: The platform gives teachers-pre-created modules focused on necessary topics including cybersecurity (Modules 2 and 3) and ethical AI (Modules 5 and 6). This saves the time and effort to develop the curriculum and ensures educators deliver high-quality digital education.

Professional Development: The platform can also help educators hone their skills and stay up-to-date on the latest trends and best practices in digital education. Any training should also put in place processes for trainers to help create and develop a culture of lifelong learning.

Educators can explore new teaching strategies thanks to the platform's interactive and captivating content, which helps students retain and enjoy learning more effectively.

Local Public Bodies The platform will provide local public authorities with evidence-based information and good practices,

enabling them to create policies which promote digital inclusion

Public officials can learn more about potential challenges and solutions, and they can develop local capacity to support these initiative

Explain how is this activity going to help to reach the project objectives.

In its efforts to enhance digital inclusion the platform delivers accessible digital education for C-VET in an inclusive way. By demystifying digital education and aligning it with the needs of the target groups, the platform enables these learners to become active participants in the digital economy, helping to bridge social and economic divides. Resources such as Module 1 and Module 7 explicitly discuss barriers to digital inclusion, lack of access, skills, and motivation. This platform is a state-of-the-art response to digital education bridging emerging skills gaps in cybersecurity and ethical AI, while raising the bar for C- VET training overall. The goal is very clear, to provide C-VET learners and educators with fundamental knowledge, skills and competencies in cybersecurity and AI. The platform is designed in collaboration with cybersecurity experts, AI ethicists and C-VET institutes, to maintain relevance, practical application and compliance. Participants learn practical skills through interactive exercises and real-world applications that allow them to implement knowledge within their personal and professional lives. With this tool and resources, C-VET educators can deliver cybersecurity and AI classes and multiply the effect. The content is adapted to the context of the C-VET sectors. It enhances collaboration among key stakeholders, ensuring that C-VET education meets the needs of the labour market and social challenges. It enables marginalized communities to engage fully in the digital economy The program sensitises learners and educators with the right kind of skills in cybersecurity and ethical AI. In a very straightforward way it is modernising C-VET curricula to meet new skills needs. In addition it encourages cooperation between C-VET institutions, industry leaders and policymakers.

Describe the expected results of the activity.

The project through its platform is projected to implement training with at least 1,500 representatives of the target groups within 2 years of the platform launch. We expect at least 300 C-VET educators and trainers to accept this resource as a tool and train other 1000 C-VET learners within 2 years of the launch Due to the multiplier effect of trained teachers and the free availability of the platform, the project will expand its reach to an additional 5,000 learners within four years of launch. The features of the platform will be presented by holding 3 workshops in Germany, Bulgaria, and Italy. Each will consist of 50 attendees, thus reaching 150 stakeholders overall. We expect the associated partners to disseminate the platform and attract the attention of additional 1000 representatives of the target group. Increased Digital Literacy: Eighty percent or more of learners who complete the platform's modules will show improved digital literacy according to pre- and post-training assessments. Increased Cybersecurity Awareness: Seventy percent or more of the learners and educators will express increased confidence stating their ability to reinforce best practices in identifying and mitigating relevant cybersecurity threats, such as phishing and malware. Better Understanding Around Ethical AI: 80% learner demonstrate clear understanding of ethical AI concepts including but not limited to bias, transparency and accountability and their application to vocational contexts Strengthened collaboration in a form of 3 new partnership projects of VET institutions with cybersecurity experts and AI ethicists to create a strong base for the ecosystem of skills that will be applied under E+Over 5 policy briefs and recommendation on the project, targeting both local and national (EU) level policymakers will be produced, potentially benefiting the inclusion of cybersecurity and ethical AI into C-VET curricula. Long-term the platform will be free to use outside the duration of the project

Please describe how you determined the grant amount attributed to this activity.

The lumps sums are decided according to the reference values in the previous programme guide and the country of legal registration of the participating organisations. We have also consulted the partners calculations of implementing activities at this level.

cyberGEIGER - 70 work days x 200 EUR per work day = 14. 000 EUR The work days include tasks related to:

- research
 - development of e-learning lessons
 - design
 - internal testing
 - internal pre-publishing evaluation
- HumAI- 108 work days x 160 EUR per work day = 17 280 EUR
- research
 - development of e-learning lessons
 - design
 - internal testing
 - internal pre-publishing evaluation
 - technical development of the platform
 - integration of the educational content
 - coordination of both the technical and research work of the other partners
 - iteration of the user interface
 - monitoring and maintenance of the platform-integration of the platform with the webpage and social media channels
- AFORISMA-40 work days x 200 EUR per work day = 8 000 EUR
- research
 - development of e-learning lessons

-design
 -internal testing
 -internal pre-publishing evaluation
 Total budget= 39280 EUR

Activity Details (Social media outreach and dissemination)

Please complete the following table

Activity Title	Social media outreach and dissemination
Venue	Virtual activity
Estimated start date	24/01/2026
Estimated end date	31/10/2026
Leading Organisation	SOCIETA' COOPERATIVA A.FO.RI.S.MA. - ACLI FORMAZIONE RICERCA SERVIZI MANAGEMENT (Italy)
Participating Organisations	cyberGEIGER GmbH (Germany) Humaniti AI Solutions EOOD (Bulgaria)
Grant amount allocated to the activity	4 220,00 €

Describe the content of the proposed activity.

This activity aims to spread the project's outcomes, increase its visibility on a local, national level and European level and to involve multipliers, the general public and decision-makers. We aim to disseminate the e-learning platform, explore new cooperation fields, engage different stakeholders in debates, reflect on the project's sustainability and create an interactive event to discuss new strategies for C-VET education. The final project conference is aimed to encourage networking, facilitate the sharing of knowledge and ideas structured in the creation of 3 new projects. It will also include a press conference and live streaming on social media to increase impact and dissemination. The social media methodology includes developing a social media content calendar for consistent presence across platforms like Twitter(X), Facebook, Instagram, YouTube and LinkedIn using relevant hashtags to increase visibility and engagement, collaborating with influencers, offering social media advertising targeting specific demographics and geographic locations. It will include hosting a social media contest to encourage engagement and user-generated content, sharing project updates, and engaging with followers to encourage conversation and feedback. The events intend to involve leaders and key stakeholders in structured conversations to explore the e-learning platform, from various perspectives. The final event will be open to the public, with specific representatives from target groups encouraged to participate. In terms of sustainability the project will facilitate the creation for a network that will put forward other 3 new projects in the field of Erasmus + for C-VET education.

Describe the target group for this activity. Who is going to take part and who is going to benefit from the results?

C-VET Learners with fewer opportunities as defined above in the application. And they will benefit with knowledge about opportunities. The campaign will raise awareness about the e-learning platform and its modules, inviting learners to undertake digital skills training. With a user-friendly, multilingual design, the platform allows learners to engage effectively. In terms of empowerment, cybersecurity and ethical AI skills will build learners' confidence and increase their employability in this rapidly growing field, allowing them to be included in the digital economy.

C-VET institution teachers, trainers and facilitators who need to upscale their digital competencies. The campaign will showcase the platform's educator resources that will allow educators to incorporate cybersecurity and ethical AI into their instruction. The campaign will provide networking opportunities, letting educators collaborate with experts and peers to exchange knowledge and ideas.

Local governments the fields of education and digitalisation will benefit from evidence-based policy insights and best practices. The campaign will derive evidence-based insights and best practices helping policy makers to enhance strategies on digital inclusion and cyber security and AI in C-VET. There is a component in building capacity where policymakers will receive access to resources and training materials to further support digital education initiatives.

Industry Stakeholders will benefit with increased opportunities for collaboration. The campaign will showcase the project's emphasis on cross-sectoral collaboration, inviting players from the industry to join forces with C-VET Institutions.

General public

Access to Digital Education and lifelong learning opportunities and motivation users to keep their digital skills current, which will contribute to both personal and professional success. The project's focus will help narrow the digital divide, creating a more inclusive society.

Explain how is this activity going to help to reach the project objectives.

The Social Media Campaign, will launch engaging content on Twitter, Facebook, Instagram YouTube and LinkedIn

attracting a wide range of stakeholders, including the target groups and the general public. By creating a content calendar, using relevant hashtags and through collaboration with influencers, the project intends to stimulate active participation and feedback from its target audience. The final conference is not envisioned just as a dissemination activity but also will serve as a platform for knowledge exchange among participants including private and public stakeholders. It will offer a space for structured dialogue centred on the digital educational results from various perspectives. This conference will be used to build a network of professionals who are interested in new projects. This networking aspect is crucial for the creation of the 3 new projects. The real digital social inclusion could be achieved with participation and the social media and outreach activity serves this purpose to the fullest extent. This activity is encouraging adoption and integration into practice, emphasising the practical benefits and effectiveness of the project outputs. Through presentation the project team will motivate the educators and institutions to integrate this digital tool into their teaching and learning processes, thus directly contributing to the project's objective of enhancing digital education and digital inclusion. This activity aims to ensure that the project's results have a lasting impact. By engaging a diverse group of stakeholders, decision-makers to learners, and creating a widespread awareness of the project's contributions to digital transformation, the project represents a real step towards a more inclusive society. This sustained impact is essential for achieving the long-term objectives of improving C-VET educational practices through innovative digital solutions and the gradual integration of AI and cybersecurity in the EU's education system.

Describe the expected results of the activity.

The social media campaign and the other dissemination activities are designed to significantly boost the visibility and awareness of the project and its outcomes among a wide audience. This includes reaching out to decision-makers, stakeholders, adult learners, educators, and the general public. By leveraging social media platforms like Twitter, Facebook, Instagram YouTube and LinkedIn the campaign aims to inform at least 20,000 people about the events and the e-learning platform. We also aim to an extensive coverage made by traditional media. We aim to involve at least 5 journalists to participate in the events extending its reach and impact beyond immediate participants to a broader audience. This media involvement is crucial for amplifying the project's messages and ensuring that information about its achievements and outcomes is disseminated widely to adults that are also not so active on social media. It could be said that a key focus of the campaign is to invite and engage at least 15,000 C-VET learners with fewer opportunities in exploring the e-learning platform. This targeted outreach is set to ensure that the benefits of the project are accessible to those who stand to gain the most, promoting inclusivity and equal opportunities for all. The overall targets of the dissemination events are in total 150 people as selected representatives from the target groups. An important result of the campaign is the active engagement, including responding to comments, direct messages, and mentions. This engagement is expected to encourage conversation, gather feedback, and foster a community around the project's objectives and activities. The successful implementation of the dissemination and exploitation campaign is expected to lay the groundwork for future cooperation among partners and stakeholders. This involves new strategies like 5 episodes of podcast series that will be published and 50 short video clips according to the consumption habits of the new generation.

Please describe how you determined the grant amount attributed to this activity.

HumAI - 420 EUR for social media campaigns across the platforms: instagram, facebook, twitter(X) , YouTube and LinkedIn.

cyberGEIGER - 1300 EUR for organisation of a final project conference on local level where we would disseminate the events offline and engage with local stakeholders. In this cost it is included the venue rent and the catering for the participants.

HumAI-250 EUR for the organisation of a project dissemination event(conference) on a local level where we would disseminate the events offline and engage with local stakeholders. In this cost it is included the venue rent and the catering for the participants.

AFORISMA-250 EUR for the organisation of a project dissemination event (conference) on local level where we would disseminate the events offline and engage with local stakeholders. In this cost it is included the venue rent and the catering for the participants.

TPM2 in Germany

HumAI- 1000 EUR for travel, accommodation and meals for 2 people that will attend both the TPM and the final project event in Germany .

AFORISMA- 1000 EUR for travel, accommodation and meals for 2 people that will attend both the TPM and the final project event in the Netherlands

Total budget- 4220 EUR

Budget Summary

This section provides a summary of the estimated project budget. The table is automatically completed taking into account the described project activities and their estimated cost.

Activities	Estimated cost (EUR)
Project Management and Evaluation	16 500,00
DICE E-learning platform	39 280,00
Social media outreach and dissemination	4 220,00
Total	60 000,00
Project lump sum	60 000,00 €

Impact and Follow-up

How will you know if the project has achieved its objectives? What tools or methods will you use?

For the evaluation of our project and its effectiveness and outreach, we will implement a strategy involving the monitoring of specific performance metrics. Below we have created a list with the critical Performance Metrics for our project.

1. Training Completion by learners- This metric quantifies the total number of participants who have successfully undergone our training program we will measure it with MOODLE plugin. Engagement of learners with fewer opportunities- This represents the tally of the target group who have engaged in the initiative's programs and sessions – google form survey questionnaire.
2. Enhancement in C-VET educators' knowledge-through initial and concluding evaluations, we aim to measure the progress in acquiring competences in the field of the platform– google form survey questionnaire.
3. Skill Advancement in C-VET learners with fewer opportunities- The progress in applicable competencies among learning pertaining to AI, cybersecurity, inventive problem-solving, and digital inclusion will be evaluated – google form survey questionnaire.
4. Implementation of mini projects- The quantity of projects or solutions conceptualized and actualized by either C-VET educators or C-VET learners with fewer opportunities after the completion of the training programme – google form post training survey questionnaire.
5. Feedback on learners satisfaction- This metric will include the participant (both C-VET educators and C-VET learners with fewer opportunities) feedback on their satisfaction with the educational content, resources, and support provided by the project team – google form post training survey questionnaire.
6. Awareness of Cybersecurity and AI Ethics- Here we will measure the degree of comprehension and consciousness regarding the topics among participants will be also followed as part of the questionnaires.
7. Involvement of the Community- This metric will measure the degree of community participation and engagement in the project activities, including the organization or participation in the final conference , will be observed by combining data from multiple sources.
8. Online Impact- This metric will include the website traffic, interaction on social media platforms, attendance at events, and coverage by the media, interviews etc..
9. Creation of New Partnerships- This metric will measure the new partnerships and the new projects that will be developed as a result of the new partnerships and projects- interviews with stakeholders
10. Partners satisfaction of the implementation and final result of the project – interviews with partners
11. Social media campaign outreach where according to the different metrics on different platforms we will evaluate the reach audience and types of engagement To minimize the carbon footprint of the project we will use only digital means of evaluation with tools like google forms, integrated software solutions on different platforms like Wordpress and other plugins, integrated surveys on MOODLE and other tools

How will the participation in this project contribute to the development of the involved organisations in the long-term? Do you have plans to continue using the results of the project or continue to implement some of the activities after the project's end?

In a mid & long-term development framework, the project will generate positive impacts for the partners in different areas and levels. 1) The first and most important impact will be the acquisition of new knowledge and skills. This positive effect brings successive benefits: 1.1) Continuous improvement of specific skills as personal growth by acquiring new knowledge and tools in basic and meta- competencies of the AI and Cybersecurity domain. 1.2) Creating a model that can support the development of collaborative processes and knowledge transfer between educators, to promote the exchange of good practices. 2) The second positive contribution will be the promotion of social inclusion, especially helping the marginalised to better to deal with new technologies and see the broader applicable perspective 3) The third positive impact will be the strengthening of the European dimension of the partners and of education in general, promoting the acquisition of experience in the European context, broadening the perspective of cooperation with other organisations interested in European projects and enabling the use of new knowledge to develop new digital training projects.

In this regard, the partners plan to include the content in their stable training offerings. They will therefore continue to use the instruments identified and developed within the project in the years after the end of the project. This is possible thanks to the option to the use of the projects e-learning platform even after the EU funding period. The partners plan to cultivate and extend the informal network between them by continuing to collaborate on further projects and through the involvement of other stakeholders engaged through the project. With the progressive advancing insight, the partners will be increasing their capacities and learn more about application of the feedback and how to integrate it into learning methodologies. This will positively impact the organisations and the staff increasing the readiness for future projects. We also see the increased quality of education delivery as a positive impact. It can be said that the insights and experiences gained from this project will contribute to refining future educational programs and initiatives. Involving integration of effective methods and strategies derived from this project into upcoming ventures. Arguably one of the strongest impacts will be seen in the enhanced continuity and sustainability. The results of this project including the educational content, and practices, will serve as ongoing assets. These resources will continue to support the target groups even when the project concludes. On another level this project will positively impact in the field of innovation and research. The project will directly motivate the partners and the associated partners to invest into further research and innovation and create new projects. Overall it will increase the partners visibility on local and national levels that can generate more collab

Please describe your plans for sharing and use of project results.

- How will you make the results of your project known within your partnership, in your local communities and in the wider public? Who are the main target groups you would like to share your results with?
- Are there other groups or organisations that will benefit from your project? Please explain how.

To ensure the effective dissemination and maximise engagement with the project, we will implement a strategic approach that involves multiple channels of attention. This approach is designed to enhance awareness and understanding of the project's goals, the e-learning platform, and the E + Programme and the EU efforts in financially supporting this kind of initiatives. The strategy is tailor made to reach our target audiences at various stages of the project lifecycle.

Webpage and E-learning Platform - will serve as a tangible digital resource offering insights into the project's objectives, the project partners behind it, and E+ Programme. The e-learning platform alongside the project webpage represent the primary hub for interested parties, providing regular updates and detailed information about the project's progress. The e-newsletters will augment the social media strategy. The e-newsletters will be made in partner languages (German, Italian and Bulgarian) and will be distributed at months 4, 9, and 13 to share the project updates and insights reaching 20k emails.. For interactive community engagement, we'll establish a presence on major social media, starting with Facebook, Instagram, Youtube, X and LinkedIn, with partners rotating management to offer diverse content and perspectives for enhanced outreach and real-time audience interaction. Every partner will develop 20 short videos presenting the project team and the achievements in reflections on the process of development. Online and offline events and meetings are planned by the project partners. The partners will present the project on different offline educational events like conferences and dissemination events. They will also develop webinars and podcast videos where they will engage with a wider audience and foster broader stakeholder participation. By partnering up with like-minded organisations and public bodies, we aim to expand our project's reach and impact through collective dissemination efforts. The Associated project partners will take an active role in the dissemination of the results, for example the cities of Sofia and Pisa will disseminate the platform among the network of at least 100 C-VET education centres under their control. To further expand the outreach we plan also to use the Erasmus plus project Facebook and LinkedIn groups where a huge amount of stakeholders are present including private and public adult education bodies.

We will use the already created facebook groups on VET education, Adult education and Erasmus project and post different content in those groups reaching out to another 20, 000 community members in approximately 60 groups.

We will use traditional media and publish at least 5 articles in online media covering the topic.

The associated partners include Universities which brings another level to the whole dissemination process, where university services will send email with notification about the project reaching more than 30, 000 students.

Project Summary

Project Summary

Please provide a short summary of your project. Please be aware that this section (or part of it) may be used by the European Commission, Executive Agency or National Agencies in their publications. It will also feed the Erasmus+ Project Results Platform.

In view of further publication on the Erasmus+ Project Results Platform, please also be aware that a comprehensive public summary of project results will be requested at report stage(s). Final payment provisions in the contract will be linked to the availability of such summary.

Objectives: What do you want to achieve by implementing the project?

The project aims at digital inclusion of C-VET learners with fewer opportunities through an educational framework in the field of Cybersecurity and Ethical AI which is based on a practical non-formal educational methodology that will be used as an addition to the formal and non-flexible framework.

Implementation: What activities are you going to implement?

By highlighting the importance of cybersecurity and ethical AI literacy in C-VET the project aims to create an advanced e-learning platform composed of seven modules aimed to educate C-VET learners, educators, and professionals and enable them to exercise the right skills and knowledge to safely navigate the digital world and enjoy full inclusion in their communities. With good project management and social media and dissemination campaign the DICE consortium will deliver a true innovation in EU

Results: What results do you expect your project to have?

Increased digital social inclusion of C-VET learners with fewer opportunities
Promoted Cybersecurity Awareness and enhanced digital and essential cybersecurity skills to fully take advantage of the digital citizenship opportunities.
Increased understanding of AI and ethical AI concepts and their use in C-VET
Established cross-sectoral collaboration
300 C-VET educators and trainers to accept this resource as a tool and train other 1000 C-VET learners with fewer opportunities

EU Values

The Erasmus+ programme's implementation, and therefore, the programme beneficiaries and the activities implemented under the programme, have to respect the EU values of respect for human dignity, freedom, democracy, equality, the rule of law and respect for human rights, including the rights of persons belonging to minorities, in full compliance with the values and rights enshrined in the EU Treaties and in the EU Charter of Fundamental Rights.

Article 2 of the TEU: The Union is founded on the values of respect for human dignity, freedom, democracy, equality, the rule of law and respect for human rights, including the rights of persons belonging to minorities. These values are common to the Member States in a society in which pluralism, non-discrimination, tolerance, justice, solidarity and equality between women and men prevail.

Article 21 of the EU Charter of Fundamental Rights: 1. Any discrimination based on any ground such as sex, race, colour, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, property, birth, disability, age or sexual orientation shall be prohibited. 2. Within the scope of application of the Treaties and without prejudice to any of their specific provisions, any discrimination on grounds of nationality shall be prohibited.

Subscribing to EU Values

☒ I confirm that I, my organisation and the co-beneficiaries (where applicable) adhere to the EU values mentioned in Article 2 of the TEU and Article 21 of the EU Charter of Fundamental Rights

☒ I understand and agree that EU Values will be used as part of the criteria for evaluation of the activities implemented under this project

Annexes

The maximum size of a file is 15 MB and the maximum total size is 100 MB.

Declaration on Honour

Please download the Declaration on Honour, print it, have it signed by the legal representative and attach.

File Name	File Size (kB)
DOH -declaration-on-honour_250304SFR.pdf	322
Total Size (kB)	322

Accession forms

Please download the accession forms, have them signed by the relevant legal representatives, and attach the signed forms here. You can attach a maximum of 90 documents.

Accession forms must be provided at the latest before the signature of the grant agreement.

File Name	File Size (kB)
ACF -accessionformAFORISMA.pdf	342
ACF -accessionForm_E10342780_3.pdf	508
Total Size (kB)	851

Other Documents

If needed, please attach any other relevant documents (a maximum of 6 documents). Please use clear file names.

If you have any additional questions, please contact your National Agency. You can find their contact details here: [List of National Agencies](#).

File Name	File Size (kB)
Total Size (kB)	0
Total Size (kB)	1 173

Checklist

Before submitting your application form to the National Agency, please make sure that:

- ☒ It fulfills the eligibility criteria listed in the [Programme Guide](#).
- ☒ All relevant fields in the application form have been completed.
- ☒ You have chosen the correct National Agency of the country in which your organisation is established. Currently selected NA is: DE02 - Nationale Agentur Bildung für Europa beim Bundesinstitut für Berufsbildung

Original content and authorship

- ☒ I confirm that this application contains original content authored by the applicant and partner organisations.
- ☒ I confirm that no other organisations or individuals external to the applicant and partner organisations have been paid or otherwise compensated for drafting the application.

Protection of Personal Data

Please read our privacy statement to understand how we process and protect [your personal data](#)
